(a) compression against angle
model, X
model, metallic footprint
model, no diffusion
geometry only (strip width)
model, Y (with RC)
chamber A, X view (data vs M3)
chamber A, Y view
tan θhits / tan θtrue
|tan θ| (reference)
(b) against column length: ratio − 1 ≃ C/N2
model, X
model, metallic footprint
model, no diffusion
geometry only (strip width)
model, Y (with RC)
published strip µTPCs (measured)
published (simulated)
chamber A, X view (data vs M3)
chamber A, Y view
C = 12
C = 7
C = 2.3
ratio − 1
N = Ltan θ/p (strips in the column)
