

Almost every neutron makes a proton we cannot see

Geant4, 10^9 EAR2 neutrons below 2 eV · per neutron entering the capsule · counts per 30 days at slide 39's flux

What the neutron does

	share	per 30 days
$^3\text{He}(n,p) \rightarrow p + t$ invisible to us: both stop in the gas	92.5 %	2.8×10^{12}
(n,γ) capture → the next figure opens this up	0.81 %	2.4×10^{10}
scatters off the wall, escapes	6.6 %	2.0×10^{11}
other	0.13 %	3.9×10^9

where the (n, γ) happens

	share	per 30 days
^{27}Al vessel	61.4 %	1.5×10^{10}
carbon-fibre wrap	3.2 %	7.7×10^8
scattered out, captured elsewhere	35.4 %	8.7×10^9
$^3\text{He}(n,\gamma)$ analytic, self-shielded	1.3×10^{-4} %	3.1×10^4
