

What we see: made at the capsule, or somewhere else

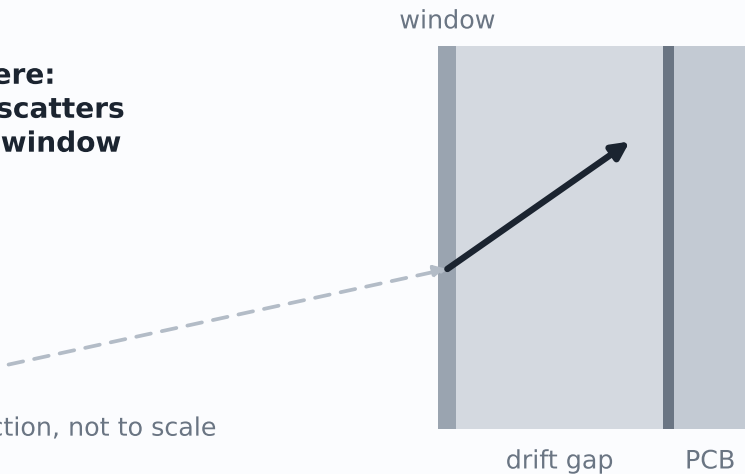

Geant4 · per capture that puts charge in a drift gap · attributed to the track, with its δ -rays, that deposits the most

made at the capsule:
the capture γ converts in the wall

the capsule from above, to scale

made elsewhere:
a γ Compton-scatters
in a chamber window

a chamber in section, not to scale

Where the charged particle was made		share	per 30 days
			
 e⁺e⁻ pair made in the capsule → the next figure opens this up	15.3 %	7.8×10⁷	
 Compton e ⁻ made in the capsule	64.5 %	3.3×10 ⁸	
 made elsewhere chamber windows and PCB, the gas itself, air	18.8 %	9.6×10 ⁷	
 other	1.4 %	7.0×10 ⁶
