

Which nucleus made the pair

capsule e^+e^- pairs with a lepton in a drift gap · Geant4 external conversion + internal pair creation added analytically

Where the capsule pairs come from

	share	per 30 days
^{27}Al : γ converts in the wall external conversion · Geant4	84.5 %	7.8×10^7
^{27}Al : internal pair analytic: Geant4 makes no internal pairs	15.1 %	1.4×10^7
carbon fibre: $^1\text{H} + ^{12}\text{C}$	0.32 %	2.9×10^5
γ from a capture elsewhere	0.02 %	2.0×10^4
$^3\text{He}(n,\gamma)$: internal pair the signal channel · analytic, self-shielded	1.1×10^{-4} %	104
