

Measured opening angle, by arm pair — data only, no model, nothing subtracted, nothing cut

PRELIMINARY

33 runs of the n\_TOF campaign on the condor full pass, each run on its own angle scale. Every unordered pair of selected tracks in one trigger; chamber B carries no angle and is excluded. Bands are Poisson. Purple:  $\theta \geq 109^\circ$ , where an X17 pair must land. Copper: the back-to-back pairs, kept.
