worst χ^2/dof of the four track fits

Nothing in this chain cuts on χ^2 . The median pair has a worst-view χ^2/dof near 40 and the tail runs past 10^4 . Dashed is the same arm pair EVENT-MIXED — an accidental by construction. Where it lies under the data a cut here removes both alike; where they separate, there is something to cut on. Values off the axis are excluded from the curve but not from its normalisation, and the key gives the fraction.
