

Scintillator Δt between the two arms [ns]

PRELIMINARY

THE coincidence measurement, and it exists only where both arms are scintillator-tagged. A prompt peak on a broad pedestal — the pedestal is what a timing cut would remove. No mixed null here: tight_coincidence.py writes real pairs only. Dashed is the same arm pair EVENT-MIXED — an accidental by construction. Where it lies under the data a cut here removes both alike; where they separate, there is something to cut on. Values off the axis are excluded from the curve but not from its normalisation, and the key gives the fraction.
