

Difference of the two legs' fitted track times [ns]

PRELIMINARY

NOT a coincidence measurement: both legs share one trigger and a leg's t0 moves with its depth in the 30 mm gap, so this is dominated by drift depth. Dashed is the same arm pair EVENT-MIXED — an accidental by construction. Where it lies under the data a cut here removes both alike; where they separate, there is something to cut on. Values off the axis are excluded from the curve but not from its normalisation, and the key gives the fraction.
