

Total charge of the quieter leg [ADC]

PRELIMINARY

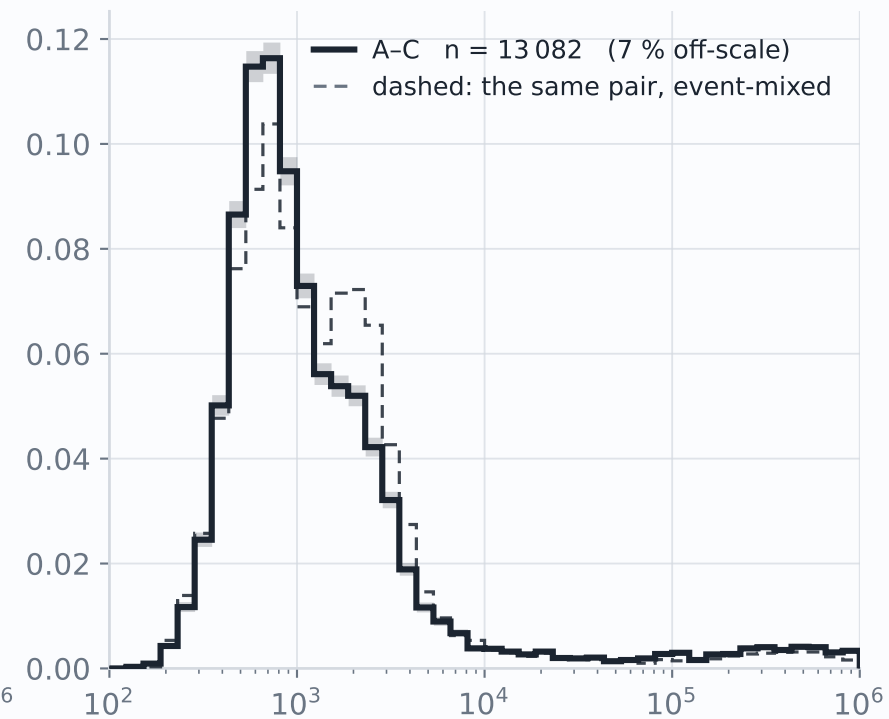

intra

perpendicular

opposing

A real pathology: q_{total} overflows on part of the sample. The median is $\sim 1.8 \times 10^3$ and the 99th percentile is $\sim 10^{13}$. Dashed is the same arm pair EVENT-MIXED — an accidental by construction. Where it lies under the data a cut here removes both alike; where they separate, there is something to cut on. Values off the axis are excluded from the curve but not from its normalisation, and the key gives the fraction.
