

Closest approach of the two legs to each other [mm]

PRELIMINARY

For a pair born in a 20 mm capsule this should be small. The median is ~100 mm. Dashed is the same arm pair EVENT-MIXED — an accidental by construction. Where it lies under the data a cut here removes both alike; where they separate, there is something to cut on. Values off the axis are excluded from the curve but not from its normalisation, and the key gives the fraction.
