opposing

reconstructed vertex radius from the beam axis [mm]

The capsule is $r = 10$ mm. The median vertex sits at ~ 67 mm. Dashed is the same arm pair EVENT-MIXED — an accidental by construction. Where it lies under the data a cut here removes both alike; where they separate, there is something to cut on. Values off the axis are excluded from the curve but not from its normalisation, and the key gives the fraction.
