

Against the per-leg pointing cut

- x from A, cut about the axis
- x from A, cut about the capsule
- x from C, cut about the axis
- x from C, cut about the capsule
- z from D, cut about the axis
- z from D, cut about the capsule

Solid: the cut is on each leg's miss distance from the nominal beam axis. Dashed: from the measured capsule position instead. Robust $\sigma = 1.4826 \times \text{MAD}$. "none" is the 150 mm build ceiling.
