

One coordinate at a time (legs within 60 mm of the axis)

Points: data. Dashed: the shuffled null through the same cut, normalised to the data. Solid: the fit — the He-3 gas projected onto this coordinate, blurred by a Gaussian, plus the null shape. Copper: the single-track capsule position ± 10 mm. In z the centre is not free; the fit only asks whether a capsule term is wanted there. [ntof_athens_26/pair_vertex_imaging](#) | 33
runs of the condor full pass, stage-3 tracks, chambers A, C, D
