

Why the intra-chamber tests cannot see a vertex: a second track in the chamber breaks the first one

Tracks gated, angle-calibrated, slope-measured and not noisy in x and y, pointing within 30 mm of the measured capsule. Multiplicity counts every gated track of the chamber in the trigger.
Copper: wft.seed.GAP_THRESHOLD_MM, below which two tracks' hits join one seed cluster. ntof_athens_26/pair_vertex_imaging | 33 runs of the condor full pass
