

Test 3: where the agreeing pairs' vertices are

Copper: the measured capsule z. Dotted: the chamber's strip plane. Shapes normalised to unit area; the mixed curve is what independent capsule tracks that happen to agree look like.
ntof_athens_26/pair_vertex_imaging| 33 runs of the condor full pass; both legs slope-measured and not noisy in x and y, pointing within 30 mm of the measured capsule, clones removed
