

The vertex is its legs, and nothing else

the transverse crossing tracks the cut and never finds a floor

A capsule image exists, for 3 % of pairs

and only with the y information left out

At a 5 mm leg cut the transverse crossing puts 97 % of perpendicular pairs inside the capsule -- on 946 of 29 617 pairs. The 3D closest approach never exceeds 21 %. ntot_athens_26/pair_vertex_imaging | 33 runs of the condor full pass, stage-3 tracks, leg pointing cut as marked
