

Summed transverse image, as a significance

Excess over the nulls in each 12×12 mm box, divided by its Poisson error (data plus scaled null). Neighbouring boxes overlap, so the map is correlated. Right: the same with no source in it. [ntof_athens_26/pair_vertex_imaging](#) | 33 runs of the condor full pass, chambers A, C, D; both legs slope-measured and not in a noisy column, within 60 mm of the axis
