

The pair vertex in 3D, with y from the legs that measure it

Data minus each class's shuffled null, normalised in the transverse corners; "balanced" gives the x slab and the z slab equal weight. Copper: the capsule at the single-track transverse position and its NOMINAL y — the y axis is not shifted to where the data put it. ntof_athens_26/pair_vertex_imaging | 33 runs of the condor full pass, stage-3 tracks, chambers A, C, D
