

Where the three peaks came from: averaging a good y with a junk one

Pairs whose crossing is within 16 mm of the capsule in x, both legs slope-measured and not noisy in x, within 60 mm of the axis; y angle scale as reconstructed. Left: the mean of the two legs' y, as plotted before. Middle: the A or C leg's own y. Right: the D leg's own y. Copper: the gas's nominal extent along the beam. ntot_athens_26/pair_vertex_imaging | 33 runs of the condor full pass, stage-3 tracks, chambers A, C, D
