

Aligning A and C onto their common x does not move the A-C z image

Right-hand rebuild: A and C moved in x (each by ~ 1 mm, opposite directions) so that their single-track band crossings coincide. That the 2 mm disagreement is a placement offset is a hypothesis being tested, not a correction. ntof_athens_26/pair_vertex_imaging | 33 runs of the condor full pass, stage-3 tracks, chambers A, C, D
