

The pointing band, and what each cut removes

Every gated, angle-calibrated track of the campaign, log colour. A track from the capsule lies on the diagonal band; the two lobes are the trigger's plastic-bar gap. Horizontal line at $\tan \approx 0$: slopes the drift timing could not measure ($|\tan| < 0.08$). Vertical stripes: noisy readout columns. D's x_local is $-z$, so D's stripes are fixed z values.
